

# Serious Growers Plant Alforex® Seeds

**2022**

Product Guide – Midwest/East

**AT ALFOREX®**

we think you should expect more from your alfalfa and forage crops. High

yields, solid agronomics, better forage quality and improved fiber digestibility are all reasonable requirements for these crops, but perhaps now is the time to reach a little higher. **Time to grow your performance expectations.**

That may be a bold challenge, but over the last several years we've seen the power in that type of thinking. Whether it's Hi-Ton® alfalfa, Hi-Salt salinity tolerant varieties or the industry leading Hi-Gest® family of performance alfalfas, each can make a real difference on the farm. And if you could take a peek at our pipeline, you'd see we've only just scratched the surface.

Our promise to you is that we'll continue leading the way and pushing the industry to new heights. We'll stay committed to alfalfa and forage. And we'll do our best to help you get more out of your alfalfa and forage crops.

**Our name stands for alfalfa and forage excellence. That's our focus, and when you use our products, that commitment shines through in every bag.**

**FOCUSED ON PERFORMANCE**

Alforex® brand products deliver a wide range of agronomic solutions tailored to where and how you farm. Real solutions—like salinity and stress tolerance, improved persistence, yield performance, better fiber digestibility and Hi-Gest® sudangrass—that help improve yield, feed efficiency and nutrition, adding value through more milk, more meat and greater productivity per acre.

**FOCUSED ON INNOVATION**

Decades of alfalfa research results in a fast paced environment of continual innovation devoted exclusively to alfalfa and forages. That means you can rely on us for groundbreaking products along with steady advances in yield, quality, pest resistance, stress tolerance and persistence.

**FOCUSED ON YOU**

When you choose Alforex Seeds, you benefit from dedicated technical experts and a sales team who focuses solely on alfalfa and forages. Their insight and experience across millions of acres when combined with the knowledge you have of the specific conditions on your farm, will find the best seed solution for you. When it comes time to plant, you won't rely on speculation; you'll rely on proven expertise.

**A Commitment to Growing Progress** We bring our global presence, deep knowledge and diverse resources so that farms can flourish, moving our world forward.

**Dedicated to agriculture** Corteva Agriscience is the only major agriscience company completely dedicated to agriculture. By combining the strengths of DuPont Pioneer, DuPont Crop Protection and Dow AgroSciences, we've harnessed agriculture's brightest minds and expertise gained over two centuries of scientific achievement.

**Our Purpose** To enrich the lives of those who produce and those who consume, ensuring progress for generations to come.

**Our values** We are driven by our beliefs and our purpose, which is to enrich the lives of those who produce and those who consume, ensuring progress for generations to come.

**Enrich lives** We commit to enhancing lives and the land. As leaders, we pursue a purpose which goes beyond our immediate interests to benefit society.

**Stand tall** We are leaders who act boldly. We accept the challenges that confront our industry as our own and will step up to ensure that agriculture progresses and thrives.

**Be curious** We innovate relentlessly. We accelerate our pace of innovation to create solutions that will deliver abundant high-quality food, now and for the future.

**Build together** We grow by working together. We embrace diversity and collaboration in order to build one company and reach out across the food system, creating shared value.

**Be upstanding** We always do what's right, maintaining high ethical standards and conducting business safely and transparently.

**Live safely** We embrace safety and the environment in all we do.

# Hi-Gest<sup>®</sup> ALFALFA TECHNOLOGY

Patents Pending

**Elite, conventional genetics with improved rate and extent of fiber digestibility**

**Elite genetics selected for high yield and quality, with a high leaf to stem ratio and more crude protein**

**Elite genetics with a track record of on-farm performance**

**Download a Product Sheet**  
Visit [www.alforexseeds.com](http://www.alforexseeds.com) to view and access a printable PDF for each Alforex alfalfa variety.

## On-farm performance

Varieties with Hi-Gest<sup>®</sup> have been proving their extra performance and value since the 2015 growing season. Livestock respond to the improved fiber digestibility and forage intake increases as expected when Hi-Gest forage is included in the ration. Dairymen who grow their own forage are rapidly converting their acres to Hi-Gest to take advantage of the higher digestibility, while commercial hay growers who focus on quality for their clients are being rewarded for preserving the identity of these higher performing lots of hay.

## Balancing yield and quality

Lignin is the complex organic compound that hardens and strengthens the plant's cell walls. In mature plants, **lignin increases yield, but negatively affects forage quality** and interferes with animal digestion. To minimize this dilemma, producers have traditionally found a compromise between yield and quality by harvesting at late-bud stage to one-tenth flower. Today's Hi-Gest varieties with faster fiber digestibility provide growers additional management flexibility around the traditional yield versus quality dilemma.

Through focused breeding Hi-Gest developed varieties offer high yield potential, a **5-10% increased rate of fiber digestion** which improves animal intake; **increased extent of fiber digestion (as measured by UNDF 240) by 5-10%, and raises crude protein of the forage by 3-5%** when compared to other conventional varieties\*. The net impact is higher testing, higher value hay which can mean 2.5 or more pounds of milk per cow per day when fed versus other conventional varieties.

## Management flexibility

Alfalfa varieties with Hi-Gest will easily fit into your alfalfa management system. The varieties have the flexibility to adjust to aggressive harvest systems to maximize yield and quality or to more relaxed schedules focused on tonnage. Either way, growers put the odds of improved returns per acre and animal performance in their favor.

## Ask your Alforex Seeds Dealer

They can tell you who's growing Hi-Gest alfalfa in your area and share their experiences with you. You may be surprised who has already made the move!

\* The increased rate of fiber digestion, extent of digestion, and crude protein data was developed from replicated research and on-farm testing. During the 2015 growing season at West Salem, WI and Woodland, CA, the following commercial dormant, semi-dormant and non-dormant alfalfa varieties were compared head-to-head with Hi-Gest<sup>®</sup> alfalfa for rate of digestion, extent of digestion and percent crude protein; America's Alfalfa Brand Ameristand 427TQ, Cropland Brands Legendairy XHD and Artesia Sunrise, Fertizona Brand Fertilac, S&W Seeds Brands SW6330, SW7410 and SW10, and WL Brands WL 319HQ and WL 354HQ. Also during the 2015 growing season, 32 on-farm Hi-Gest hay and silage samples were submitted to Rock River Laboratory, Inc. for forage analysis. The results for rate of digestion, extent of digestion and percent crude protein were averaged and compared to the 60 day and four year running averages for alfalfa in the Rock River database which included approximately 1,700 alfalfa hay and 3,800 silage 60 day test results and 23,000 hay and 62,000 silage tests results in the four year average.

# PERFORMANCE

“We had a forage sample taken of our Hi-Gest 360 after our 4th cutting last year and this is what the results were: Protein- 26%, ADF - 27%, NDF - 37%, RFQ – 210. My nutritionist said this is one of the best forage samples he has ever seen. This stuff is like rocket fuel for my dairy cows.”

*Ken Kocher  
Buck's Pride Dairy  
Bloomville, Ohio  
Customer of Burtch Seed Co.*

## Hi-Gest® Products

AFX 460 ----- page 10

Hi-Gest 360 ----- page 10

The logo features a green trapezoidal shape at the top with the word "YIELD" in white. Below it, "Hi-Ton" is written in a large, bold, black font with a registered trademark symbol. Underneath "Hi-Ton" is a horizontal line, and below that, the words "PERFORMANCE ALFALFA" are written in a smaller, bold, black font.

**YIELD**  
**Hi-Ton**<sup>®</sup>  
**PERFORMANCE ALFALFA**

- ✓ **Maximize productive harvests and total seasonal yield**
- ✓ **Maximize milk/meat per ton and per acre**
- ✓ **Maximize heat units and conserve soil moisture for crop growth**

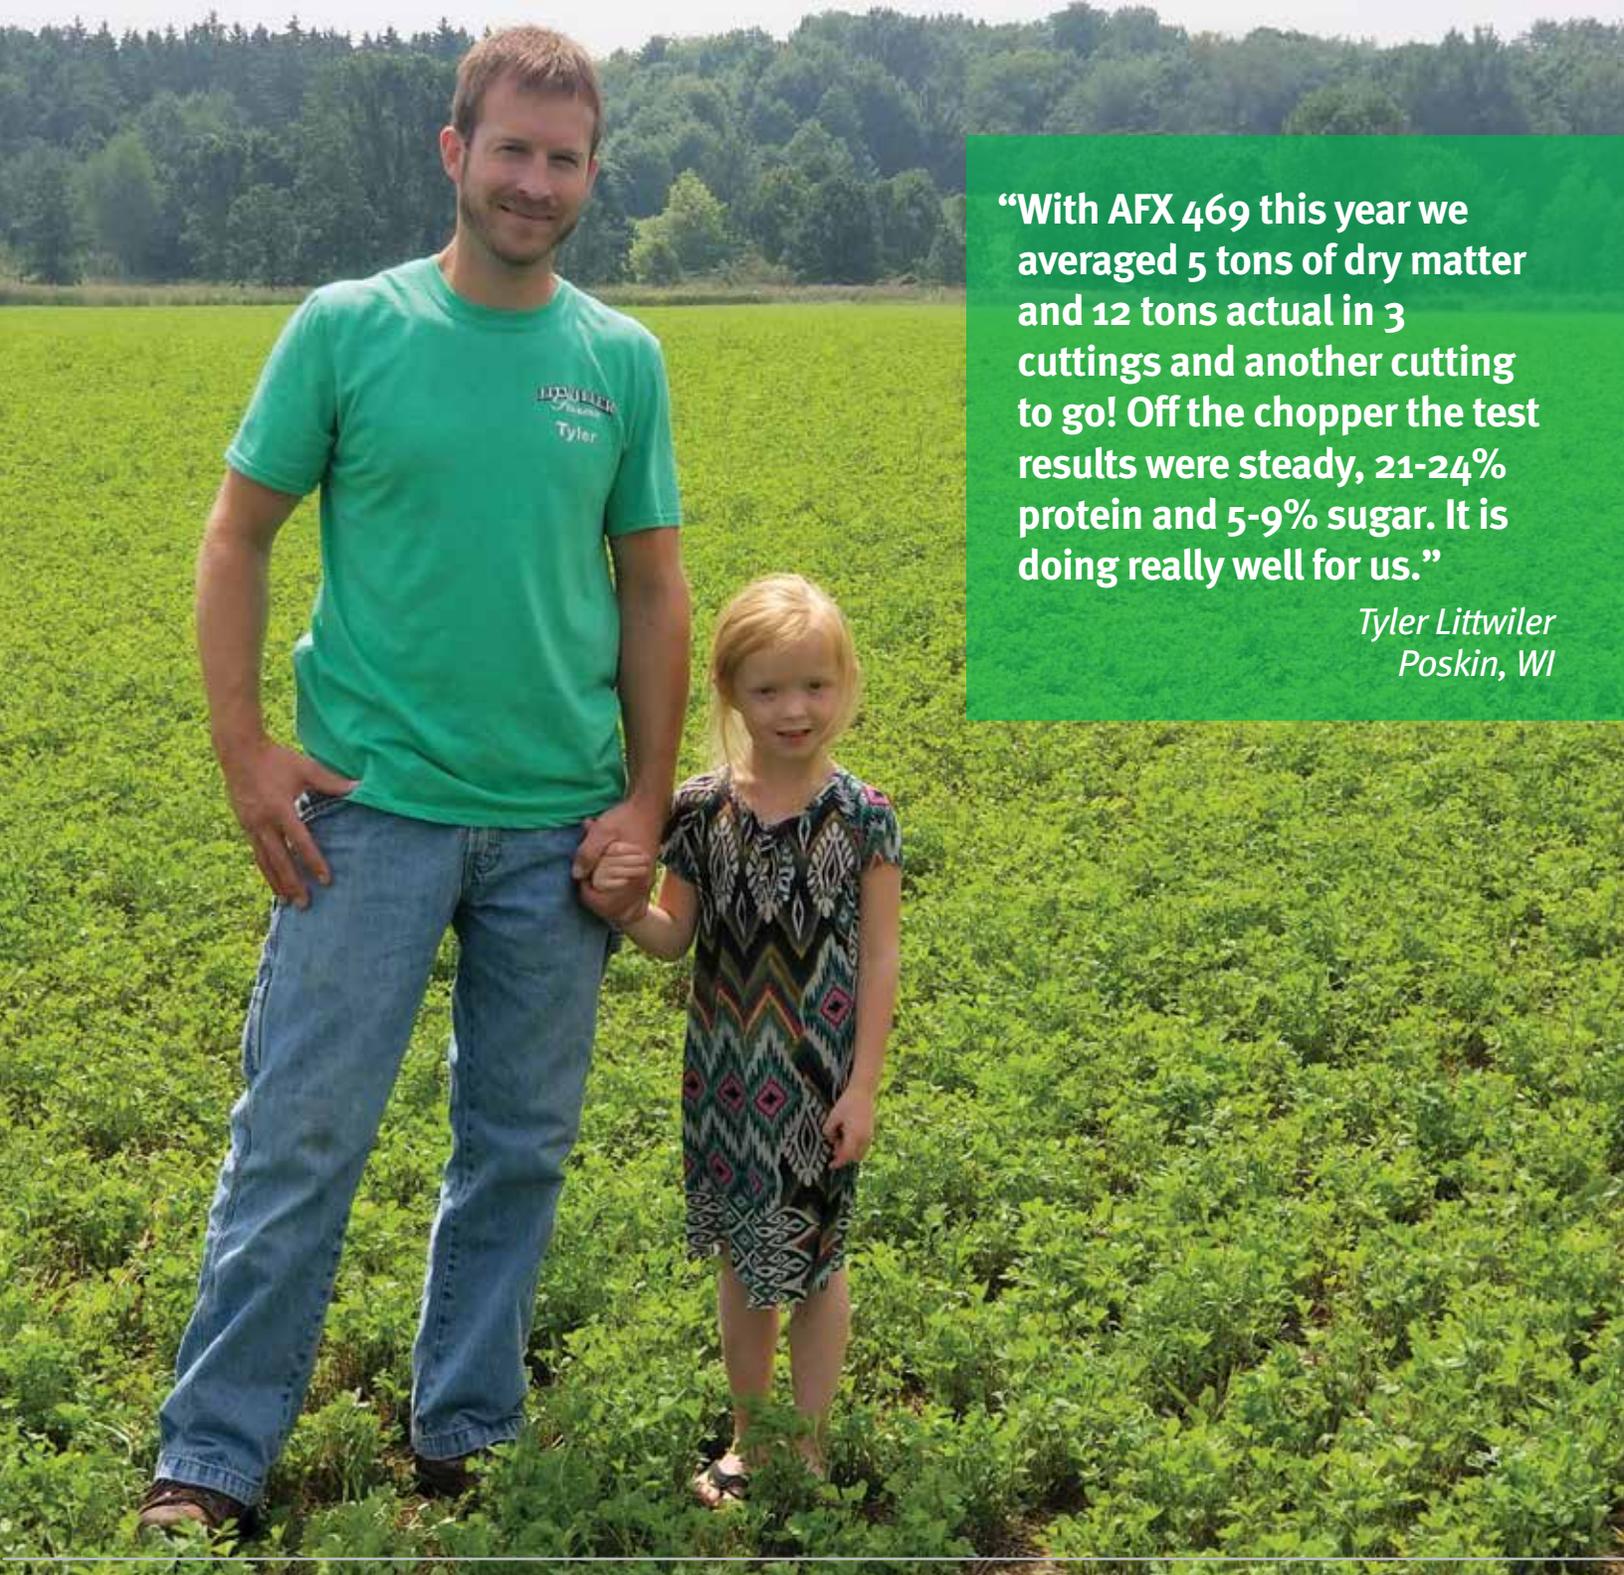

### **Hi-Ton<sup>®</sup> Performance Alfalfa**

There are three Alforex alfalfa varieties that have earned the Hi-Ton<sup>®</sup> designation. These varieties are AFX 579, AFX 469, and AFX 429. Each has exceeded the yield of peer experimentals, and commercial alfalfa varieties by 5% in Alforex Seeds replicated testing, the minimum threshold for Hi-Ton<sup>®</sup> alfalfa. Alforex alfalfa varieties carrying the Hi-Ton<sup>®</sup> designation are the first choice for the aggressive manager pushing their alfalfa acres to maximize seasonal dry matter yield.

When alfalfa fields are green and growing, chances are they are generating extra yield. The faster recovery after harvest **speeds green-up by 3 to 5 days**, shortening the days to harvest maturity and the next cutting. This faster growth starts with the first crop and gives a head start to each season and the number of cuts taken before the fall cutoff. Along the way, more of the season's total yield is harvested at mid-summer when heat units are at their peak and weather can be more cooperative.

To carry the FastGrowth rating, Hi-Ton varieties must average at least 2 cm of growth per day starting with spring green-up. Most commercial varieties range from 1.5 to 1.9 cm per day, which gives FastGrowth varieties a performance advantage in the field.

# HIGH YIELD

“With AFX 469 this year we averaged 5 tons of dry matter and 12 tons actual in 3 cuttings and another cutting to go! Off the chopper the test results were steady, 21-24% protein and 5-9% sugar. It is doing really well for us.”

*Tyler Littwiler  
Poskin, WI*

## Hi-Ton® Products

AFX 579 ----- page 12

AFX 469 ----- page 12

AFX 429 ----- page 12

HarvXtra® Alfalfa with Roundup Ready® Technology can increase your cutting flexibility giving you higher quality or increased yield potential. Conventional alfalfa breeding doesn't compete with those valuable xtras.

### **XTRA QUALITY**

HarvXtra Alfalfa delivers a higher RFQ and NDFd than conventional varieties cut on the same day. On average, 14-18 percent higher forage quality (RFQ) and NDFD across cuttings than conventional varieties harvest at the same stage of maturity.<sup>1</sup>

### **XTRA YIELD POTENTIAL**

If your operation needs more tonnage, you have the flexibility to achieve up to a 20% higher yield at harvest<sup>2</sup> by extending your cutting window up to 10 days.

### **XTRA CLEAN FIELDS**

Roundup Ready® Technology delivers unsurpassed weed control and crop safety.

### **XTRA TIME**

HarvXtra Alfalfa with Roundup Ready Technology puts you back in charge of your cutting schedule.

Roundup Ready® Alfalfa system provides the opportunity to deliver unsurpassed weed control with superior crop safety, allowing you to grow more, higher-quality alfalfa.

### **Better Stand During Establishment Means Better Stand Persistence**

Roundup Ready Alfalfa offers significant establishment advantage in both yield potential and quality. This is a result of improved weed control and crop safety through Roundup Ready PLUS® Crop Management Solutions.

### **Broadest Application Flexibility**

With the broadest application timing window plus excellent crop safety, Roundup Ready Alfalfa requires minimal waiting — only 5 days before grazing or harvest.

### **Increased, High-Quality Yield Opportunity**

Roundup Ready Alfalfa can deliver a higher percentage of pure alfalfa in hay and haylage than competitors, along with improved quality. Roundup Ready Alfalfa has low ADF (acid detergent fiber), low NDF (neutral detergent fiber) and high RFV (relative feed value).

HarvXtra® is a registered trademark of Forage Genetics International, LLC. HarvXtra® alfalfa with Roundup Ready® technology is enabled with Technology from Nobel Research Foundation Institute, LLC. Roundup Ready® is a registered trademark of the Bayer Group, used under license.

Do not export alfalfa seed or crops containing Roundup Ready® technology including hay or hay products, to China pending import approval. In addition, due to the unique cropping practices, do not plant this product in Imperial County, California. Purchase and use of HarvXtra® alfalfa with Roundup Ready® technology is subject to a Seed and Feed Use Agreement.

Always read and follow pesticide label directions. Alfalfa with Roundup Ready® technology provides crop safety for over-the-top applications of labeled glyphosate herbicides when applied according to label directions. Glyphosate agricultural herbicides will kill crops that are not tolerant to glyphosate. ACCIDENTAL APPLICATION OF INCOMPATIBLE HERBICIDES TO THIS VARIETY COULD RESULT IN TOTAL CROP LOSS.

Corteva Agriscience is a member of Excellence Through Stewardship® (ETS). Corteva Agriscience products are commercialized in accordance with ETS Product Launch Stewardship Guidance and in compliance with the Corteva Agriscience policies regarding stewardship of those products. In line with these guidelines, our product launch process for responsible launches of new products includes a longstanding process to evaluate export market information, value chain consultations, and regulatory functionality. Growers and end-users must take all steps within their control to follow appropriate stewardship requirements and confirm their buyer's acceptance of the grain or other material being purchased. For more detailed information on the status of a trait or stack, please visit [www.biotradestatus.com](http://www.biotradestatus.com).

# AFX 460

A patent pending variety

### Performance

- A high yield potential, variety with Hi-Gest® Alfalfa Technology for geographies using fall dormancy 4-5 varieties
- A product of forward breeding for improved yield and forage quality
- Features improved fiber digestibility and better animal performance when compared to other conventionally bred varieties. Variety patent pending

### Management

- Responds to today's recommended best management practices
- Adapted to aggressive high quality production systems or more relaxed high yield practices
- No known soil type limitations

### Appearance at Harvest Maturity

- Plants are medium-tall with a dense canopy of dark green leaves up and down the stems
- A strong foliar leaf disease package contributes to a high leaf-to-stem ratio and higher crude protein

### Agronomics

Yield rating:	5 or Best
Fall dormancy class:	FD 4
Winter hardiness class:	WS 1.5
Multifoliate leaf expression:	93%/High MF
FastGrowth rating:	2.03/Fast

### Pest Package

# Hi-Gest® 360

A patent pending variety

### Performance

- A high yield potential, variety with Hi-Gest® Alfalfa Technology with improved fiber digestibility, intake and extent of digestion versus other conventional alfalfas
- A product of traditional plant breeding with a variety patent pending
- A variety that has been meeting grower and livestock producers expectations since the 2015 growing season

### Management

- Adapted to today's best alfalfa management practices
- Adapted to aggressive high quality or more relaxed high tonnage management systems
- Rations using Hi-Gest can be easily balanced by nutritionists with the results of an accurate feed test

### Appearance at Harvest Maturity

- Plants are medium-tall, with a higher stem count, axilarial branching, and a dense canopy of leaves up and down each stem
- A high leaf-to-stem ratio and more crude protein than other conventionally bred, high quality, dormant alfalfa varieties at harvest maturity

### Agronomics

Yield rating:	5 or Best
Fall dormancy class:	FD 3
Winter hardiness class:	WS 1.5

“Our family has been farming this land since before the Revolutionary War. We’ve been here a longtime and we are progressive with our alfalfa. I saw the announcement of Hi-Gest back in 2015 and could see what it could do for us. We were one of the first to plant Hi-Gest in the east and have been planting more each year. It helps us take care of our land and cows.”

*Elton Gehman  
Gehman Farms  
Thompstontown, PA*

# AFX 463RR

## Performance

- AFX 463-RR is an alfalfa with the Roundup Ready® technology for use in multiple growing regions including areas prone to stem nematode pressure
- 33 of 35 disease resistance package and is very winter hardy
- Very good standability and high yield potential in multiple growing environments

## Management

- Early season weed control with glyphosate herbicides helps improve establishment success and first year yield potential compared to conventional varieties

## Agronomics

Yield rating:	5 or Best
Fall dormancy class:	FD 4
Winter hardiness class:	WS 2

# AFX 455HVX

## Performance

- AFX 455-HVX is an alfalfa with the HarvXtra® trait and Roundup Ready® technology used to produce the highest quality alfalfa forage in the industry
- Strong disease resistance package and is very winter hardy
- High yield potential in multiple growing environments

## Management

- Early season weed control with glyphosate herbicides helps improve establishment success and first year yield potential compared to conventional varieties
- Choice of delaying cutting by 7-10 days or cutting for highest RFQ

## Agronomics

Yield rating:	5 or Best
Fall dormancy class:	FD 4

# AFX 469

## Performance

- For growers who aggressively manage their established alfalfa acres
- A 11% yield advantage versus PGI 557
- FastGrowth ability shaves 3 to 5 days off the time between harvests to maximize seasonal yield
- A strong 1.5 winter survival rating

## Management

- Fast-growing variety for production areas that use fall dormancy 4 and 5 alfalfas, and when four or more cuts are expected each season
- Average seedling year yield performance when spring direct seeded
- Very early harvest maturity; reaches late bud or early flower 3 to 5 days ahead of most dormant alfalfas
- Very fast green-up after harvest and accelerated growth to harvest maturity

## Appearance at Harvest Maturity

- Tall and showy, with large dark green leaves

## Agronomics

# AFX 429

## Performance

- A widely adapted variety that maximizes yield and quality under aggressive or relaxed harvest management systems
- Strong multiple pest package including stem nematodes for western growers
- Features stable yield performance into the later harvest years when longer rotations are desired

## Management

- Adapted to production zones all across the U.S. where fall dormancy 3, 4 or 5 varieties are normally recommended
- A milk per acre winner when aggressively managed for dairy hay
- A Hi-Ton yield variety with an average green-up rate after harvest
- Expected to perform very well in mixtures with cool season grasses or other legumes

## Appearance at Harvest Maturity

- Plants at bud stage will be medium-tall and feature a uniform canopy of large, medium-green leaves

## Agronomics

Yield rating:	5 or Best
Fall dormancy class:	FD 4
Winter hardiness class:	WS 2

### Performance/Management

- Quick-establishing, deep-rooted, long-lived perennial bunchgrass that is easily managed for pasture or hay
- Adapted to a wide range of environmental conditions including wet soils, and tolerates alkalinity and salinity
- When established Forte tall fescue grows quickly, is endophyte-free and has fine leaves for improved palatability over KY 31 tall fescue

# Optima BRAND Orchardgrass

## Late Maturity

### Performance/Management

- Late-maturing, long-lived, winter-hardy perennial bunchgrass that can be grown alone or in a mixture for hay or pasture
- Widely adapted orchardgrass with increased tillering to produce a dense stand without the clumping of traditional varieties
- Excellent rust resistance
- An ideal component in mixtures with alfalfa

“We’re a certified organic crop and dairy farm in central Pennsylvania. Alfalfa is the base of our grass/legume hay mixture and we choose Hi-Gest for its improved digestibility, harvest flexibility and ability to meet organic standards. Our new spring seedings are off to a great start.”

Andrew Ranek  
Ranek Family Farms  
Mifflin, PA

## Also available:

- Smooth Bromegrass
- Climax Timothy
- VNS Medium Red Clover

# Mercury BRAND Annual Ryegrass

## Cold Tolerant

### Performance/Management

- Early-maturing annual ryegrass with cold tolerance for winter pasture in the southeastern U.S. or as early-harvest green-chop or silage, or as a cover crop in the northern half of the U.S.
- Adapted to over-seeding into fields or pastures of other species to boost yields and quality. Responds to fertility and timely management.
- Rust resistant

# Jetta BRAND Italian Ryegrass

## Cover Crop/ Emergency Forage

### Performance/Management

- Cool-season biennial for use as a late-summer/early-fall cover crop or as a late-spring planted nurse or forage crop
- Being a biennial, Jetta has a good chance of surviving winter, but will not put on a seed head when planted late spring
- Use lower seeding rate if using as a nurse crop to establish legumes

### Seeding Rate Recommendations

# Journey BRAND Perennial Ryegrass

## For Permanent Pastures

### Performance/Management

- Cool-season, perennial ryegrass for use as pure stands or in mixtures for permanent pastures intended for 3 to 5+ productive harvest seasons
- Responds to fertility, adequate moisture and best grazing practices
- When planting with legumes or in mixtures with other grasses, reduce the seeding rate of Journey to prevent smothering by Journey's fast growth habit

### Seeding Rate Recommendations

- 5 = Late or Best

# Imperial BRAND Timothy

## Late Maturity

### Performance/Management

- Late-maturing, perennial bunchgrass for the traditional timothy production area for hay, silage, or pasture
- Best adapted to soils with good drainage
- Responds to best management practices when grown alone or in mixtures
- Very good seedling vigor and can be established in the spring or fall

### Seeding Rate Recommendations

# All Grass Pasture Mix

## Widely Adapted

### Performance/Management

- All Grass Pasture Mix can be used for pasture, hay production, wildlife habitat or soil conservation plantings
- Components, as a mixture, adapt to a wide range of growing conditions and soil types
- Versatile, economical mixture for season-long production

### Mixture Components\*

- 20% Optima Brand Orchardgrass—Rapid re-growth after harvest
- 20% Journey Brand Perennial Ryegrass—Forage quality
- 20% Imperial Brand Timothy—Winter hardiness and forage quality
- 20% Forte Brand Tall Fescue—Endophyte-free and durability
- 10% Smooth Bromegrass—Easy to establish and very persistent
- 10% Marquis Brand Festulolium—Summer productivity

### Seeding Rate Recommendations

- See chart below

\*Components are subject to availability and may change over time

# Equine Hay & Pasture Mix

## Season Long Grazing

### Performance/Management

- Mixture of cool-season grasses formulated for horses on pasture that has the option of harvesting as dry hay
- Includes perennial species that recover quickly after close grazing and other species that contribute to yield and palatability when harvested as hay
- Endophyte-free and does not contain a legume component

### Mixture Components\*

- 30% Optima Brand Orchardgrass—Rapid re-growth after harvest
- 15% Bardenby Bluegrass—Tolerates close grazing and spreads to fill in open spots
- 15% Imperial Brand Timothy—Early season growth and yield
- 15% Jetta Brand Italian Ryegrass—Quick establishment
- 15% Marquis Brand Festulolium—Summer productivity
- 10% Journey Brand Perennial Ryegrass—Forage quality

### Seeding Rate Recommendations

# Charger BRAND Teff Grass

## Quality Forage Fast

### Performance/Management

- Warm-season, summer annual grass that produces multiple crops of high quality and palatable hay for horses, dairy and beef cattle
- Low input crop that is easy to grow
- PVP (Plant Variety Protected) variety

# EverGraze BRAND Ladino Clover

## Large Leaf Type

### Performance/Management

- Widely adapted, large-leaf ladino white clover for overseeding into permanent pastures or as part of grass/legume mixtures
- Best adapted to the Midwest, Mid-South and Northeastern U.S. and later maturing than small leaf types and most intermediate leaf types for superior vegetative yields
- Less aggressive in pastures than small or intermediate leaf types
- Plants are tolerant or resistant to the common diseases and viruses found in the marketing territory
- In the field or pasture, look for tall, showy plants with an upright growth habit and large leaves with markings

### Seeding Rate Recommendations

- See chart below

## Clover Recommended Seeding Rates

Product	Bag Size	Seeding Method and Pounds Per Acre				
		Drilled Pure Stands	Broadcast Pure Stands	Interseeding	Over/Frost Seeding	Grass/Hay Mixture
EverGraze Brand Ladino Clover (34% coated)	50	5 to 8	7 to 10	2 to 3	4 to 7	2 to 3

## Cover Crop Recommended Seeding Rates

Product	Bag Size	Seeding Method and Pounds Per Acre				
		Drilled Pure Stands	Broadcast Pure Stands	Interseeding	Over/Frost Seeding	Grass/Hay Mixture
Ripper Brand Radish	50	8 to 10	10 to 12			2 to 4

# Ripper BRAND Radish

## Deep Tap Root

### Performance/Management

- Selection of daikon radish for use as a cover crop to improve soil tilth, water infiltration and organic matter
- Ripper Radish can be planted as pure stands or in mixtures
- Scavenger crop that requires limited fertilizer and low inputs
- Plant in late summer or early fall 30 to 60 days prior to the first killing frost date. Tolerant to frost until temperatures fall below 25°
- Crop decomposes quickly leaving behind improved soil structure and organic matter levels

### Seeding Rate Recommendations

- In pure stands, plant 4 to 6 pounds per acre with a precision planter, 8 to 10 pounds per acre when broadcast
- In cover crop mixtures, include 2 to 4 pounds per acre
- See chart below

# HayKing II Hybrid Sudangrass

**BMR**

## Performance

- Low-lignin content increases digestibility in livestock rations
- Warm-season, summer annual with seasonal dry-matter tonnage equal to corn silage as silage, pasture or hay
- Low-input requirements and an efficient user of nitrogen and water, with few weed or pest concerns
- Superior forage quality versus BMR hybrid sorghum x sudangrass with reduced prussic acid

## Management

- Adapted to all areas of the U.S. where hybrid sorghum x sudangrass or hybrid sudangrass is normally grown
- Plant after danger of frost and soil temperatures exceed 65°
- Fine stems, leafy and aggressive tillering after harvest. Leave a 3 to 4" stubble
- Follow all sorghum feeding precautions

## Appearance at Harvest Maturity

- A fast-growing hybrid with very fine stems, aggressive tillering and a mass of leaves with the characteristic brown mid-rib coloring. Usually chest-high before head extension

## Seeding Rate Recommendations

- Approximately 32,000 seeds per pound
- For the Midwest, Northeast, and Southeast, use 30 to 60+ pounds per acre in 6" to 18" rows
- For the Great Plains dryland, seed 15 to 30+ pounds per acre in 6" to 18" rows. When irrigated increase to 30 to 60+ pounds in 6" to 18" rows
- For Intermountain West irrigated, seed 40 to 60+ pounds per acre in 6" to 18" rows
- For Southwest irrigated, seed 50 to 100+ pounds per acre in 6" to 18" rows

# ForageKing Sorghum x Sudangrass

**BMR**

## Performance

- Warm-season, summer annual for multiple harvests as pasture, hay or silage
- Carries the brown mid-rib gene for improved forage quality, palatability and animal intake over non-BMR hybrids
- Excellent drought tolerance for low rainfall areas

## Management

- Adapted to all areas of the U.S. where hybrid sorghum x sudangrass or hybrid sudangrass is grown
- Plant after the danger of frost and soil temperatures exceed 65°
- Leave a 3 to 4" stubble at harvest and apply 1 to 1.25 pounds of actual nitrogen for each day to the expected next harvest
- Follow all sorghum feeding precautions

## Appearance at Harvest Maturity

- Wide, showy leaves with the characteristic brown mid-rib coloring. Usually chest-high before head extension

## Seeding Rate Recommendations

- Approximately 16,000 seeds per pound
- In 6" to 18" drilled rows, seed 10 to 25 pounds per acre dryland and 15 to 40 pounds per acre irrigated
- For broadcast, seed 10 to 30 pounds per acre dryland and 20 to 40 pounds per acre irrigated

# PhotoKing Sorghum x Sudangrass

**BMR**

## Performance

- Warm-season, summer annual best adapted to rotational grazing, hay or silage where a wide harvest window is desired
- Stays in the vegetative growth stage until day length is 12 hours and 20 minutes or less, which is usually September, depending on latitude
- Features a very good disease resistance package

## Management

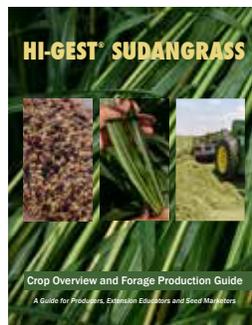

- Adapted to all areas of the U.S. where hybrid sorghum x sudangrass or hybrid sudangrass is grown
- Plant after the danger of frost and soil temperatures exceed 65°
- Leave a 3 to 4" stubble at harvest and apply 1 to 1.25 pounds of actual nitrogen for each day to the expected next harvest
- Follow all sorghum feeding precautions

## Appearance at Harvest Maturity

- Wide, showy leaves with the characteristic brown mid-rib coloring

## Seeding Rate Recommendations

- Approximately 15,000 seeds per pound
- For 6" to 18" drilled rows dryland, seed 12 to 35 pounds per acre and 30 to 40 pounds per acre irrigated
- For broadcast, seed 10 to 30 pounds per acre dryland and 20 to 40 pounds per acre irrigated

## Download the Guide

# SweetKing Sorghum x Sudangrass

## Conventional

### Performance

- Warm-season, summer annual for multiple cuttings as hay, silage, or rotational growing; a great choice for green manure
- 55-60 days to maturity
- An economical option when the Brown Mid-Rib trait isn't required

### Management

- Adapted to all areas of the US where hybrid sorghum X sudangrass or hybrid sudangrass is grown
- Plant after danger of frost and soil temperatures are above 65 degrees
- Leave 4-6 inches of stubble at harvest and apply 1 to 1.25 pounds of actual nitrogen for each day to the expected next harvest
- Follow all sorghum feeding precautions

### Appearance at Harvest Maturity

- Wide leaves on plants that may reach 6+ feet tall at harvest

### Seeding Rate Recommendations

- Approximately 16,000 seeds per pound
- In 6 to 18 inch drill rows, seed 10-25 pounds per acre dryland and 15 to 40 pounds per acre irrigated
- For broadcast, seed 10-30 pounds per acre dryland and 20-40 pounds per acre irrigated

# DwarfKing Forage Sorghum

## Brachytic BMR

### Performance

- Warm-season, single-cut forage sorghum that produces a grain head
- Plants with a grain head are normally 6 to 7 feet tall with very good standability at harvest maturity
- Highly digestible and palatable silage for beef or dairy cattle

### Management

- Plant in spring or early summer to reach soft-dough maturity in 95 days
- Plant after the danger of frost and soil temperatures exceed 65°
- Exhibits good seedling vigor for no-till planting into stubble
- Apply 1 to 1.25 pounds of actual nitrogen for each day from seeding to the expected harvest date

### Appearance at Harvest Maturity

- Plants with large grain heads will be 6 to 7 feet tall with thick stalks and very wide leaves

### Seeding Rate Recommendations

- Approximately 16,000 to 18,000 seeds per pound
- In corn planter row widths, seed 6 to 8 pounds per acre dryland and 10 to 12 pounds per acre irrigated
- For broadcast, seed 10 to 15 pounds per acre dryland and 15 to 20 pounds per acre irrigated

# SilageKing Forage Sorghum

## Conventional

### Performance

- Forage sorghum hybrid that efficiently produces high forage yields and is easy to manage
- Fits silage production needs of dairies and feedlots across the Southern Great Plains and Southwestern U.S.
- Efficient user of water and fertility

### Management

- Uses a third less water and half the applied nitrogen fertilizer as corn for silage
- Reaches the soft-dough stage in approximately 115 days
- Strong stalks for very good standability
- Produces yields and silage quality comparable to corn for silage and exceeds corn on marginal soils
- Yields 5,000 to 7,000 pounds per acre of red grain, resulting in a very high grain-to-stover ratio. This significantly increases digestible dry matter per acre when fed as silage. The high protein content and total digestible nutrients make SilageKing perfect for the feedlot or dairy

### Appearance at Harvest Maturity

- Crop height will be 6 to 8 feet tall with a strong stalk
- Dense, numerous, wide, dark-green leaves

### Seeding Rate Recommendations

- Approximately 15,000 seeds per pound
- Irrigated: 10 pounds per acre in rows or drilled at 20 pounds per acre
- Dryland: 4 to 5 pounds per acre in rows or drilled at 15 to 20 pounds per acre

NOW AVAILABLE

The information and recommendations contained in this brochure are based on average performance of the products over a wide range of growing conditions, climates, soil types, and management systems. Actual performance may be adversely affected by extreme conditions or grower negligence.

18369 County Road 96  
Woodland, CA 95695

“AFX 469 give us lots of protein. We don’t have to go to the feed mill, it’s out here in the field. We don’t cut our hay super early, but we still get a lot of protein. We get a lot of tonnage out of it as well.”

*Jerry and Jeff Croes  
Deerfield, WI*
