

Harvest Supervisor Interface

Clarity Through Innovation

Harvest Supervisor[™] Solution

Our unique software interface connects forage chopper flow meters or your truck scale to update your inventories in Feed Supervisor® Software using provided dry matter and tonnage.

- ▶ Combat shrink
- ▶ Maximize existing inventories
- Check yields
- ► Accurately plan acreage needs

BENEFITS AND FEATURES

- Shrink management and control
- · Accurate and up to date inventories
- Harvest analyzed by field, truck, and chopper
- Chopper efficiency can be evaluated by yield per hour

Shrink "The Silent Thief" Identify the cause with Harvest Supervisor[™]

The first line of defense for inventory management is to identify shrink with Harvest Supervisor.™

Commodity shrink on a dairy ranges between 1 - 12%.

Reducing shrink by merely 3% on a 500 cow dairy would save more than \$45,000 annually.

Harvest Supervisor[™]

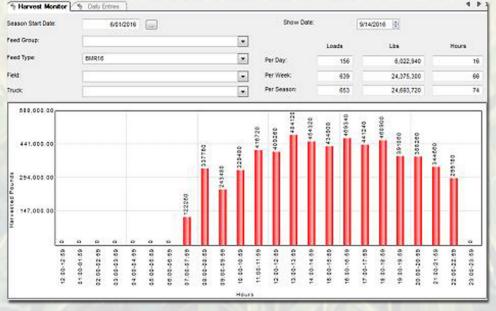

Today's forage choppers, truck scales, and forage box scales can contain the technology to provide detailed harvest information. Now you can put that data where it means the most – in your dairy's feed inventory!

It is as simple as importing your field data to a desktop folder, set up Harvest Supervisor, and let it pull your harvest right in.

- Record truck number, field name, tonnage and dry matter
- Eliminate potential error and cut the time of hand entering numbers and field information
- You can track it all in a few clicks with Feed Supervisor[®] inventory reporting

- Track efficiency of your harvest day with the Harvest Monitor Tool
- · Run impactful reports for annual production

| Field | Field | Free | Field | Fiel

Provides you with valuable field output reports!

Plan for the future with accurate inventory and projected feed usage.
