

Hoof Supervisor™ System

Lameness and hoof health in general have become a major focus throughout the dairy industry. Lack of good on-farm data has been a major bottleneck as producers strive to reduce and eliminate lameness. Hoof Supervisor™ is a chute-side data recording system that will allow the trimmer, veterinarian, nutritionist and herd manager to better understand the main issues causing lameness on the dairy.

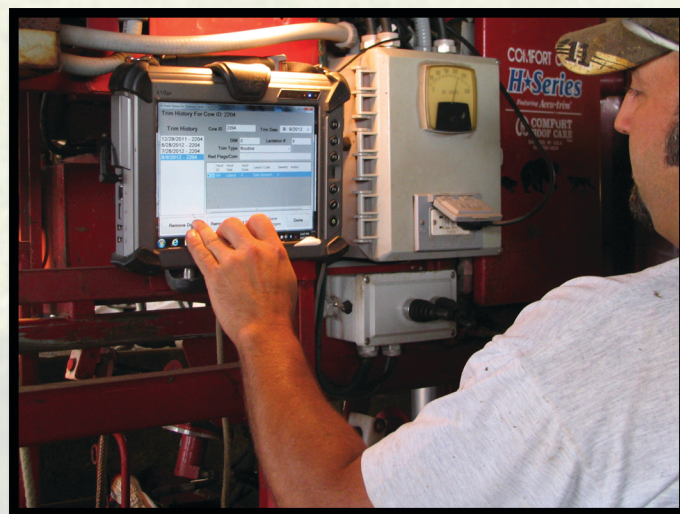

Benefits of Hoof Supervisor™

- No "Lost/Missed" Cows
- Easy/Accurate Follow-up
- Total Numbers/Detailed History
- Lameness Reduction
- Required Documentation with No Extra Labor

Hoof Supervisor™ Software can be loaded to any full Microsoft Operating System. For your convenience we offer options in ruggedized touch screen computers that will go the distance. Lesion data can then be analyzed by the time of year, pen and the stage of lactation. This data will provide you with the information necessary to diagnose the problem and also find and eliminate the cause.

No more manure stained papers that attempt to describe what was discovered during a trim session. Now Hoof Supervisor™ can provide you with reports and graphs that give clarity to your hoof health program.

Hoof Connect™

An ON FARM
desktop version for
your dairymen.

- ✓ Upload
- ✓ Download
- ✓ Create
- ✓ Review
- ✓ Analyze
