

Innovative Tools For Important Decisions

Feed Supervisor® Solution

Feed Supervisor® is the easy to use feed management solution for your dairy. Manage every aspect of your feeding program: Rations, Bunks, Inventory, Employees.

Designed by a veteran dairy nutritionist to give you, your managers and your feeders the specific information you need to work as a team and improve farm operations, profit and efficiency.

Get Results When You Use the Right Tool

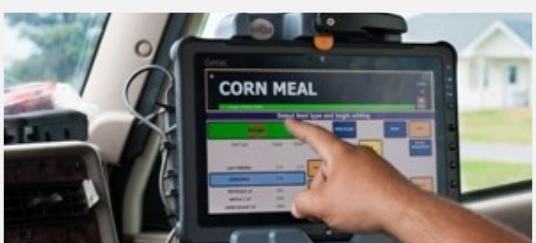

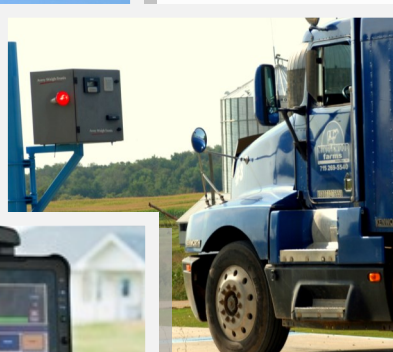

Feed Supervisor® has the secret to improving your feeding program. Quick change ration tables, inventory asset reports, complete pen information with a single click. Innovative features you won't find from the other guys. Touchscreen technology takes it to a whole other level.

Modern Dairies need Feed Supervisor®

- ✓ Clear communication with your feeder?
- ✓ Automated data entry for your manager?
- ✓ Dry Matter Intakes your nutritionist wants?
- ✓ Inventory Asset Reporting your banker wants?
- ✓ Interface from your herd management program?
- ✓ Security Levels to ensure data integrity?

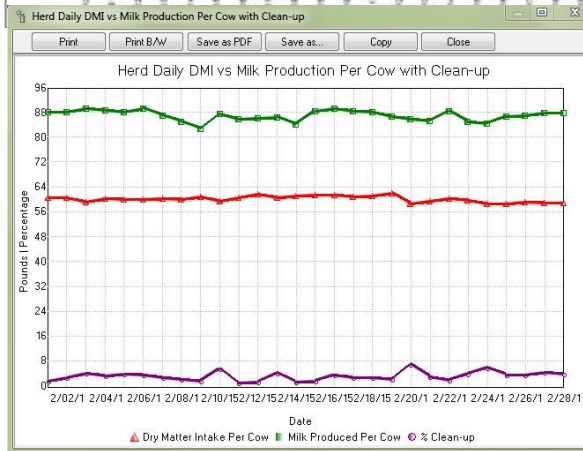

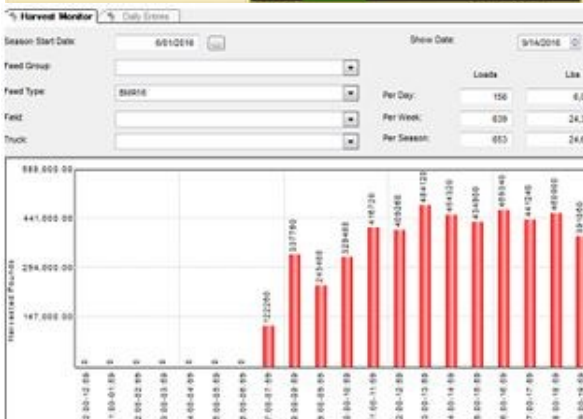

FS»Touch™ Sets the New Standard for Modern Dairies

If your feeder is a management level employee, FS»Touch™ gives him all the functionality of the office computer in the cab. With the **FS»Touch system**, your feeder can see complete data from yesterday, make bunk calls, change targets and **adjust dry matter percent** right in the tractor. And the best part? You know exactly what changes he made. He can **switch haylage** piles in the middle of feeding and let the FS»Touch **do the dry matter conversion for him** until your nutritionist can send new rations! Adding clean up back into a ration is calculated automatically with the **Clean Up Optimizer**. Batch consistency is made simple with individual ingredient mix timers. What about the feeders that need supervision? FS»Touch's built-in **Scheduled Feeding** locks them down to performing the tasks you assign, in the order you assign them. Wi-Fi data transfer and data confirmation ensures total data protection.

FS»Touch feeder Dave says: "If a guy like me...that knows nothing about computers can learn it after two batches, anybody can!"
