

WHAT IS NMP?

Nutrient Management Planning (NMP) maximizes economic benefits for growers while also protecting the environment by measuring and managing the application of nutrients on cropland.

NMP is a systematic approach evaluating the plant nutrient needs, regulatory requirements and nutrient applications.

Benefits of NMP

- Properly credits all sources – manure, plant material and commercial fertilizers
- Protects water quality and reduces negative environmental impacts
- Meets regulatory requirements
- Saves money and resources

Who needs a NMP?

Everyone could benefit from NMP, but a plan is required for the following situations:

- Any operation storing manure
- Operations with >1,000 animal units
- Any farm claiming a Farmland Preservation Tax Credit
