

**Clear,
Simple
Decisions
For Your
Dairy.**

 **BoviSync**

Integrate data insights into your work.

Thousands of events happen on a dairy each day. Relevant information and decisions need to be recorded and eventually analyzed. The value of that data hinges on insights that it can provide.

BoviSync® helps you get the most out of your dairy through:

STREAMLINED DATA ENTRY:

Make it seamless for employees to capture data as they complete tasks. Use metrics to enhance training and improve data entry accuracy over time.

SIMPLIFIED DATA ANALYSIS:

Generate intuitive reports that help make accurate and timely management decisions.

Current herd management software programs are cumbersome and outdated. You shouldn't need a computer science degree to optimize your dairy. Distinct answers should drive important decisions. A simple, yet powerful, herd management software system is here.

Clear, Simple Decision Making

BoviSync streamlines work and makes it easier to analyze through:

- Simplified communication of tasks that need to be completed
- Customized solutions for your specific herd situation
- Intuitive analysis that drives processes through insights

This is the foundation to resolve all dairy management challenges.

“Herd checks are great with the wand and phone instead of coming back and spending an hour or two in the office.”

Joe Sattler | J&J Pickart | Malone, WI

“The BoviSync app is what we use to run our dairy. We've eliminated paper and save time doing it.”

Jon Beller | Beller Farms | Carthage, NY

MOBILE ENTRY

BoviSync uses hand-held devices to simplify cow-side work. The application allows employees to be more productive by providing the best tool available to streamline herd work. The right information is collected to make decisions and data entry seamless as tasks are completed. Information only needs to be recorded to improve accuracy and efficiency.

SMARTER DESIGN

An employee scans a cow's electronic ID tag, and their handheld device shows an ID number highlighted in blue. Your employee grabs the blue syringe and administers the dose. The event is automatically recorded in real time with the technician. Customize the app to provide cues that engage employees.

TRACK EVENTS

BoviSync has made managing data simple and mobile. No more long lines of confusing code. Analysis can be done with easy, intuitive real-language commands.

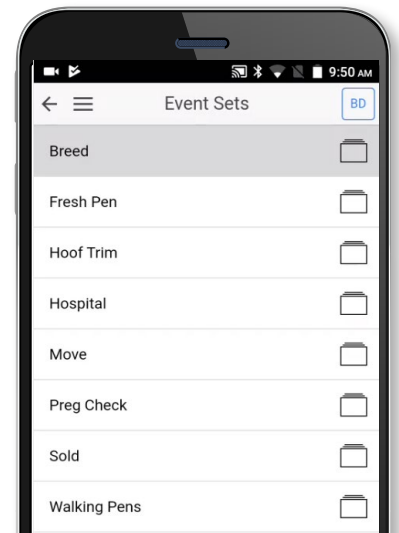

Clear Insights, Profitable Decisions

You have goals and aspirations for your dairy. BoviSync has the power and the platform to help make those dreams happen.

With BoviSync, you can:

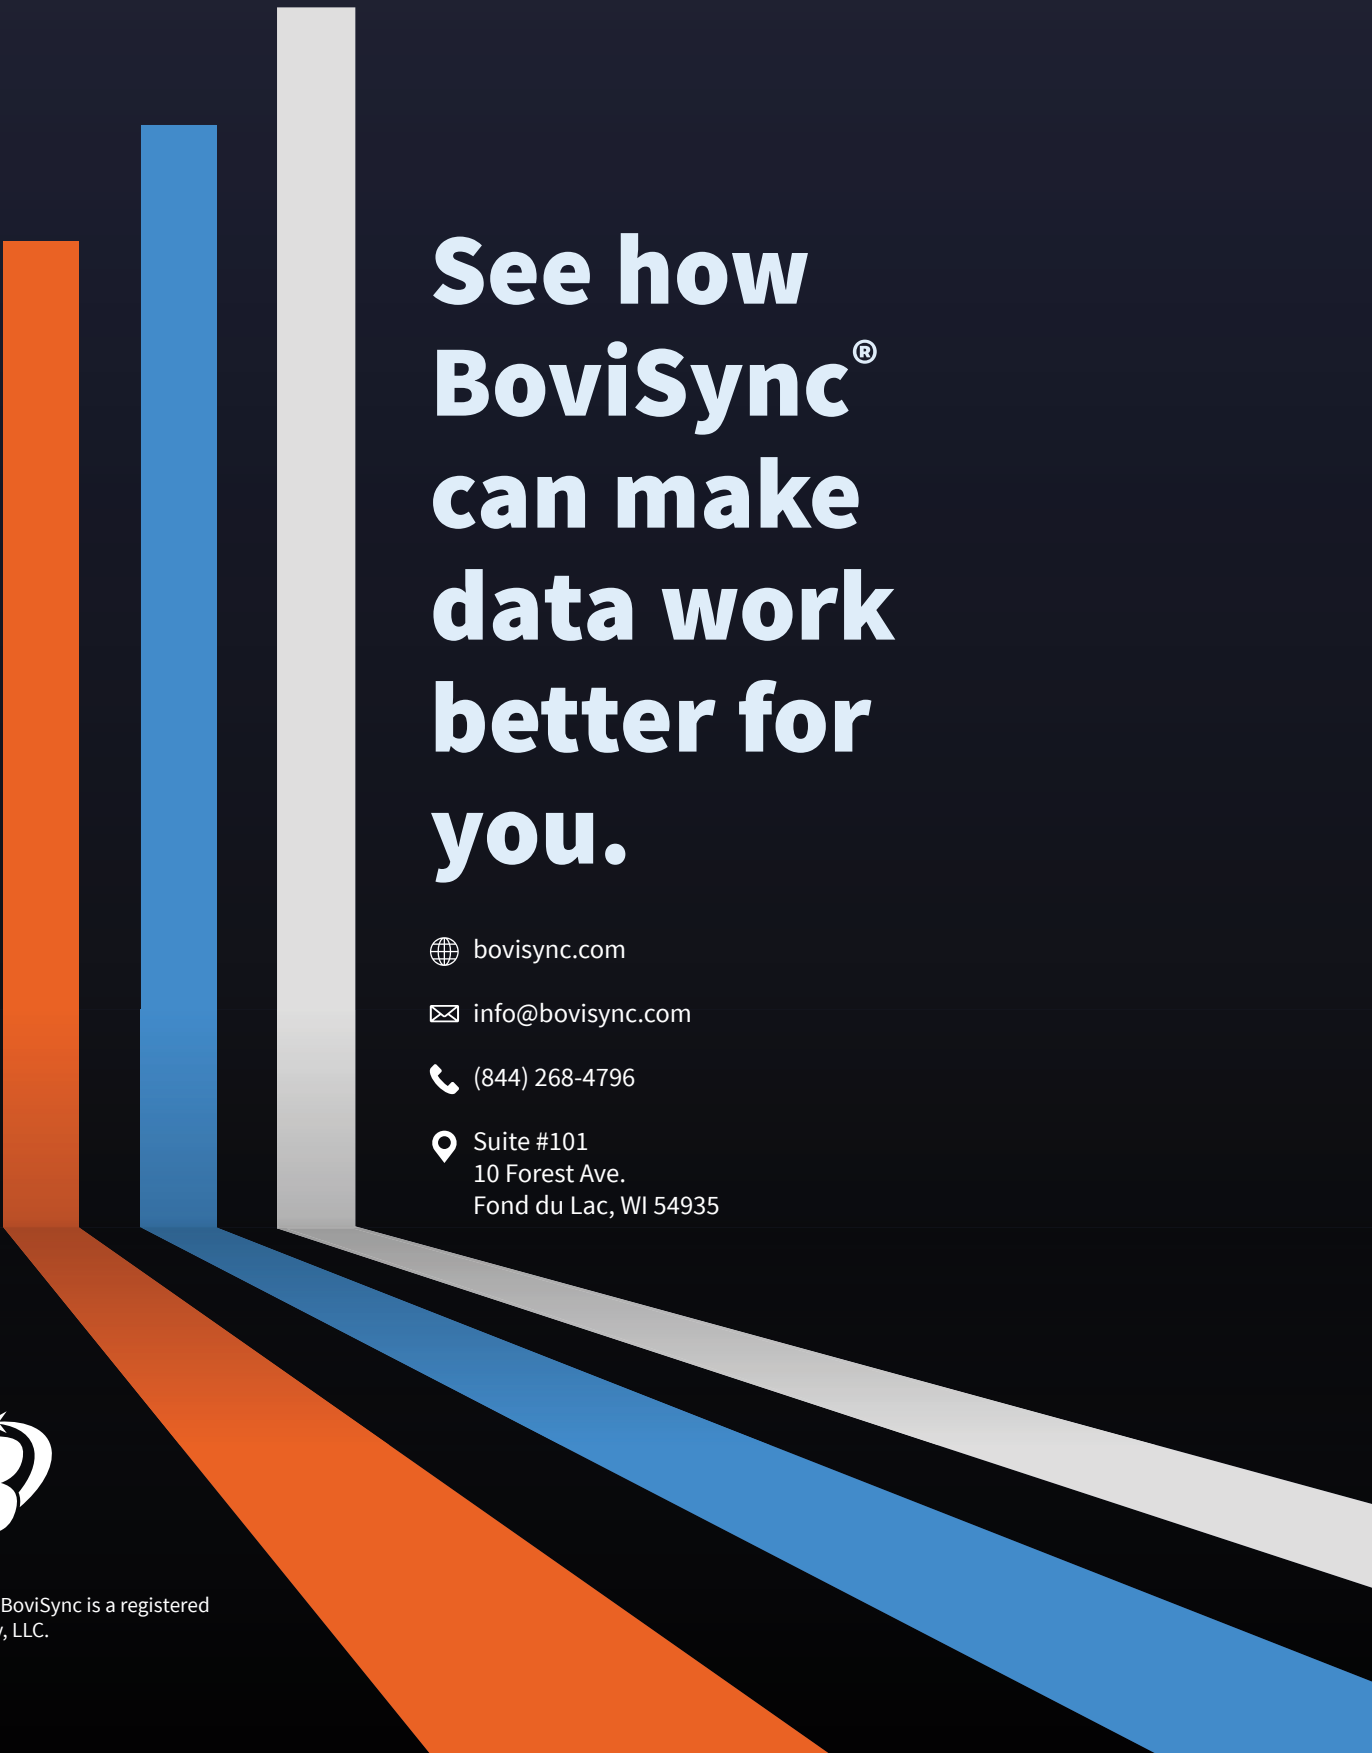

- Analyze employee performance to improve training and reduce protocol drift
- Transparently manage data to create unique solutions for your dairy
- Use cloud-based technology to analyze data across multiple operation sites and systems
- Provide seamless, real-time access to your consultant team
- Drive decisions that improve the health and welfare of a large number of animals and the people who manage them
- Optimize performance to build a legacy for your dairy and future generations

When systems have order and predictability, efficiency improves along with the accuracy of business decisions. BoviSync customers have partnered with a herd management system with the foundation to make their business vision happen.

“ We can access the data from either dairy from anywhere; and the program allows us to view data from either dairy individually or both dairies combined, which is extremely helpful.

Scott Ruby | Fir Ridge Dairy | Scio, OR
