

# When Calves Need Fast Support

## Rapid Digestive Health Support For Dairy and Beef Calves

Raising calves requires a lot of support to help maintain normal digestive health and healthy immune function. Accomplishing that can help grow healthy calves that can hit their genetic potential and be the foundation for a profitable herd in the future.

Last Stand® is the innovative all-natural paste that quickly delivers support for intestinal well-being and a functioning immune system in dairy and beef calves. The broad based formula is designed to help support proper digestion, normal intestinal health and support the immune system when a rapid response is needed.

**The novel formula starts with First Arrival® and adds additional supportive ingredients that makes Last Stand® a powerful tool for raising healthy calves that can be given orally anytime and anywhere!**

Given orally to dairy and beef calves, all-natural Last Stand® provides the following ingredients that quickly help maintain a healthy GI tract and support the immune system.

- Encrypt® is a unique fiber source that helps maintain the protective layers of the gut
- Dried egg yolk and whole egg proteins
- Contains a source of micro-encapsulated, live (viable) naturally-occurring micro-organisms
- Essential oils for flavor
- Specialized condensed whey solubles
- Mannan-oligosaccharides (MOS)
- B Vitamins
- Vitamin D3

## More advanced than any other product in its class

Enhanced Last Stand® is designed to provide rapid, anytime, anywhere support for maintaining normal intestinal health. With 70 percent of the immune system in or around the GI tract, supporting normal digestive health is important. Your calves are the future of your operation and having Last Stand® on hand when needed offers a powerful tool for helping raise healthy, large calves.

### Giving calves the boost they need

- Use during environmental stress, feed changes, upon arrival from another operation, before leaving the sale barn or during transportation.
- Excellent for beef operations on day 1 or when rapid support is needed in the field.
- Last Stand® may be administered with or without antibiotics to deliver rapid support for dairy and beef calves.
- The ingredients in Last Stand® will not interfere with antibiotic regimens nor vaccination protocols and will quickly deliver support for intestinal health and healthy immune function.

Give entire contents orally to dairy and beef calves, as well as cattle of all ages. Repeat as necessary.
