KlingonBlue™

LONG-ACTING FOOTBATH

Mixing Instructions:

Dilution Ratio: Approximately 1:3 parts water

Use one 6.5-gallon pail of KlingonBlue™ Liquid Concentrate per 25 gallons of water.
For a Standard **50 Gallon Footbath**, use **2 pails KlingonBlue Concentrate**.

Agitate mixture with a rake or stiff broom

Recommended Usage:

Run KlingonBlue footbath **once per week** for 4 weeks continuously when beginning KlingonBlue or until hoof issues are noticeably reduced. Ensure footbath level is high enough to have all hooves fully submerged. Change footbath when heavily soiled (after approx. 200 cows pass through) and replenish when solution is depleted (below 4 inches in depth).

Repeat weekly program until severity improves; then go **bi-weekly footbath program** (using KlingonBlue once **every two weeks**) for maintenance. **Repeat as a routine on regular basis.**

Average Cost / Lost-Profit per case of Digital Dermatitis is \$275 or MORE!

KlingonBlue is the ANSWER!
