## ENGINEERS SCIENTISTS

As the regulatory landscape continues to change for Wisconsin farmers, planning for successful operations while maintaining compliance with codes and regulations is increasingly complex. Miller Engineers & Scientists' team of professional engineers, environmental scientists, surveyors, and farm professionals will help you develop innovative, cost-effective, and long-serving solutions to the challenges that face your farm. Our staff works closely with DNR, DATCP, NRCS, and County Conservation Departments to fulfill the permit requirements for your operation. We also provide assistance to secure funding for your projects from NRCS programs as well as other state and local funding sources.

Start with Miller! We tailor our services to meet your needs whether you are considering a major expansion, upgrading existing facilities, or just seeking to stay in compliance with current regulations and permit requirements. Our experienced staff will work closely with you to design facilities that not only fit into your current operation, but will meet your long-term business goals. From conceptual planning through construction documentation, Miller has the experience and regulatory relationships in place to make your next project a success!
