

QBud Station

Wireless, digital inventory management for Animal Health products and supplies.

The QBud Station

- Eliminates emergency orders and stock-outs
- Automates inventory management using existing shelving or coolers
- Reduces manual processes by automating supply tracking and reordering
- Enhances visibility to supply usage with user-friendly reporting
- Improves inventory accuracy with wireless automation technology
- Integrates with additional Cubex technologies to automate 100% of animal health inventory

Cubex QBud Specifications

The QBud Station includes:

- QBud Station touchscreen PC
- BioID fingerprint technology

Available through MWI Animal Health and Micro Technologies.

How it Works

QBud is a wireless, radio frequency device that tracks supply usage. Equipped with Cubex's Push-to-Take technology, QBuds can be placed in multiple locations throughout the facility to automate all inventory transactions.

1. Supplies accessed.

Users press a button when removing supplies. Inventory levels and usage are tracked.

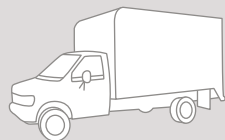

2. Supplies reordered.

Items that reach minimum levels are reordered via the Internet from your suppliers.

3. Supplies delivered.

Your suppliers receive orders from Cubex and deliver the requested items for restocking.

4. System stocked.

Supplies are quickly restocked back to maximum levels by utilizing a restock ID number.

Actual QBud Station Implementations

"After installing the Cubex system, the amount of time I spend managing drugs and supplies has dropped precipitously. On top of that, I've been able to reduce my on hand inventory without the risk of running out of anything at an inopportune time." — Will Leone, DVM, Legacy Farms, Plainview, TX

Cubex Ongoing Support/Features

\$75 per month License Service and Support fee after installation includes:

- 24/7 Support from Micro and Cubex
- - Talk to a person not a computer
- Ongoing automatic updates
- New enhancements
- Email alerts for the system
- Remote monitoring of the customer's system
- Custom reports
- Operational efficiency evaluations
- Auto re-ordering system
- Automatic system backups to Cubex server
