SmartLite™

DETACH SMART, IMPROVE PERFORMANCE

SmartLite™

The innovative SmartLite™ detacher system is designed to manage 4 milking points with one single control unit. It uses a very accurate resistance sensor to measure the milk flow. This special sensor has a wide measuring range which provides you with the flexibility to set the minimum milk flowfor detaching the milking, aligning it perfectly with the BouMatic high-flow concept.

The SmartLite™ detacher is simple and convenient and will improve comfort and milking performance.

- **Clear Milking Status Information –** With the bright, multi-colored LED button you have an instant overview of the milking status at each stall and can react to any challenges that may arise.

- **Economical –** Design has one control unit for every 4 milking points

- **Accuracy –** Resistance Sensor has a wide measuring range with the flexibility to set the minimum milk flow for detaching the milking cluster from low (under 250g/mn) to high flow rates (above 1000g/mn)

- **Simplicity and Convenience –** Single-button operation for functions such as Start/Stop and Manual/Automatic; by just lifting the cluster, QuickStart activates to start the milking process for you

- **Compatibility –** Works with the BouMatic shut off valve range for new and retrofit applications

- **Easy Installation –** The control unit can be easily mounted onto the metal frame of the stall or under the curb
