Forecasting 2019

Wednesday, February 27, 2019

12:00 p.m - 1:00 p.m. CT

**Eric
Snodgrass**
*Co-Founder,
Global Weather and
Climate Logistics*

What does the weather have in store this year?

Long-range weather predictions are critical to the decisions producers make as they prepare for the upcoming planting season. Tune in to this webinar as weather expert Eric Snodgrass assesses current projections for the 2019 growing season.

He'll address grain markets by pointing out stressors across the country that could impact grain prices moving forward and he'll analyze how past weather events have impacted summertime markets. In addition, he'll provide the latest forecasts for the upcoming growing season and showcase methods of forecasting excessive heat, moisture and drought.

Take more control over the role weather plays on your crops, herd health, and milk production; start using the tools and resources available to make the unpredictable more predictable.

Eric Snodgrass is the Director of Undergraduate Studies for the Department of Atmospheric Sciences at the University of Illinois at Urbana-Champaign. He is also the co-founder of Global Weather and Climate Logistics, LLC., which recently merged with Agribility Inc., a precision farm management and predictive analytics company, where he serves as co-founder and senior atmospheric scientist.

Sign up today at www.pdpw.org or call 800-947-7379.

PDPW members register for \$100. Non-members register for \$125.

In the case of a date or time conflict, this session will be available to watch at your leisure via a link emailed to you after the webinar. To view an entire library of past webinars, go to www.pdpw.org/webinar-library.
